1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Diener et al in view of Mossman et al , Sanvido et al and Daniel et al .

Diener et al discloses motor as an actuator of a moveable element against a variable load, method for increasing torque output of motor to overcome load exceeding nominal type output of motor comprising steps of sensing when high load condition exists and increasing voltage provided to motor to increase torque output when high load exists , see col 3 lines 10-65, and col 4 lines 5-25. Diener et al lacks disclosing stepper motor, pintle and air valve, and fuel cell. Mossman et al disclose stepping motor see col 4 lines 1-65. Sanvido et al discloses pintle and air valve see col 7 lines 10 and 53. Daniel et al discloses fuel cell, see abstract . It would have been obvious to one of ordinary skill in the art to combine apparatus of Diener et al with stepper motor of Mossman et al since any type of motor could be utilized if desired in place of specific motor and pintle and air valve of Sanvido et al and fuel cell of Daniel et al are for improved torque control.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is

Art Unit: 2837

filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

4. With respect to applicant's argument that Diener does not provide a method for when motor stalls, Examiner would like to state that just because it doesn't explicitly state that , the Diener reference does recognize stalled condition, which is the same as sensing motor stalls , see claim 14 and 8.

5. In response to applicant's argument that Diener and Mossman is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, stepper motor of Mossman can be used for motor control in Diener , especially since Diener discloses different type of motors can be used .

6. In response to applicant's argument that questions obviousness , the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the

Art Unit: 2837

references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).
